Define Problem Statements (Customer Problem Statement Template):

Farmers often face difficulties in selecting the most suitable crop for cultivation due to varying soil nutrient levels, unpredictable weather conditions, and limited access to scientific agricultural guidance. Choosing an inappropriate crop can lead to reduced yield, financial losses, and inefficient use of resources such as water and fertilizers. The OptiCrop – AI-Based Crop Recommendation System addresses this problem by analyzing key soil parameters (Nitrogen, Phosphorus) to make informed decisions, improve productivity, and promote sustainable farming practices.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A farmer	Select the most suitable crop for my agricultural land	I don't know which crop matches my soil nutrients and weather conditions	Weather, soil pH, rainfall, and nutrient levels vary from place to place, making the decision difficult	Confused about choosing the right crop and worried about crop failure
PS-2	A farmer	Increase crop yield and profit	I rely on traditional farming knowledge and guesswork	There is no easy tool that provides data-driven crop recommendations	Uncertain about making the best farming decision
