

Customer Journey Map

Date	25 June 2026
Team ID	xxxxxxx
Project Name	AI based crop recommendation
Maximum Marks	2 Marks

Customer Journey Map

customer begins by visiting the OptiCrop website and learning about the AI-based crop recommendation system. After understanding the application's purpose, the user enters soil nutrient values and environmental conditions through the prediction form. The system processes the information using the trained Machine Learning model and instantly recommends the most suitable crop, helping the user make informed agricultural decisions.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions	• Visits the OptiCrop website. • Learns about the application. • Explores its features.	• Enters soil nutrient values (N, P, K). • Provides Temperature, Humidity, pH, and Rainfall. • Clicks the Predict Best Crop button.	• Views the recommended crop. • Analyzes the prediction result. • Uses the recommendation for crop planning.
Touchpoint	• Home Page. • Navigation Bar. • About Page.	• Find Your Crop Page. • Input Form. • Predict Button.	• Prediction Result Section. • Recommended Crop Display. • Find Your Crop Page.
Customer Thought	• Which crop is suitable for my land? • How does this application work? • Can AI help improve farming?	• Are the values I entered correct? • Will the recommendation be accurate? • Did I enter all required information?	• What will the result be? • Why was it approved/rejected? • What Should I do next?

Customer Feeling	The customer feels interested while exploring the application and hopes to receive an accurate crop recommendation.	The customer feels careful while entering soil and environmental parameters and expects the recommendation to be reliable.	The customer feels satisfied after receiving the recommended crop and uses the result for agricultural planning.
Process Ownership	The customer explores the Home and About pages, while the OptiCrop application provides information about its features and functionality.	The customer submits the required input values, and the Flask application validates and preprocesses the data before passing it to the Machine Learning model.	The Machine Learning model analyzes the input values and the OptiCrop application displays the recommended crop instantly.
Opportunities	• Improve project information. • Add farming tips. • Enhance website navigation.	• Add real-time input validation. • Improve user experience. • Simplify the prediction form.	• Integrate weather forecasting. • Add fertilizer recommendations. • Include crop disease prediction and yield estimation.
